The global Triazine market size is predicted to grow from US\$ 424 million in 2025 to US\$ 494 million in 2031; it is expected to grow at a CAGR of 2.6% from 2025 to 2031.

A triazine is class of nitrogen-containing heterocycles. The parent molecules' molecular formula is $C_3H_3N_3$. They exist in three isomeric forms, 1,3,5-triazines being common.

MMA Triazine is a cyclic tertiary triamine. It is mainly used as a scavenger for sour gases like H_2S and mercaptans in gaseous or liquid hydrocarbon streams.

MEA-triazine is the most commonly used chemistry for applications requiring a non-regenerative H_2S scavenger. Other chemistries are available (MMA-triazine, glyoxal, zinc-based, iron-based, and others) but MEA-triazine has the highest market share because it is the lowest cost in use solution. Triazines are low cost in use despite the fact that the molar efficiency of the chemistry in capturing H_2S is significantly below theoretical maximum efficiency.

North America is the major market for triazine, accounting for over 40% of the market share. Europe is next with about 25%.

Hexion, Eastman, Baker Hughes, Sintez Oka and others are the major players, with the top three accounting for about 20% of the market.
