The global Triazines Light Stabilizers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Triazine UV absorber has a high absorption capacity for 280~380nm UV light. It is a kind of high-efficiency absorbing light stabilizer, which is a derivative of 2-hydroxyphenyltriazine, which contains a hydroxyl group in the ortho position. The ultraviolet absorption effect of this kind of compound is related to the number of adjacent hydroxyl groups, the more the number of adjacent hydroxyl groups, the stronger the ability to absorb ultraviolet rays. Introduce different substituents. It can reduce the basicity of the s-triazine ring, but it improves the light fastness of the compound and the compatibility with the resin. Its disadvantages are poor compatibility with polymers and coloring of the application.

United States market for Triazines Light Stabilizers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
