Trichloromethane, or Chloroform, is an organic compound with formula  $\text{CHCl}_3$ . It is a colorless, sweet-smelling, dense liquid that is produced on a large scale as a precursor to PTFE. It is also a precursor to various refrigerants. It is one of the four chloromethanes and a trihalomethane.

Chloromethane, also known as methyl chloride is produced from sulfuric acid, sodium chloride and methanol mixture. Chloromethane is an extremely flammable and colorless gas, hence widely used as a chlorinating and methylating agent in organic chemistry. Chloromethane application as intermediate in drug manufacturing and as a local anesthetic in medication has resulted in its growing demand in pharmaceutical industry.
