## Abstracts

The global Triclosan for Cosmetic market size is predicted to grow from US\$ 49.2 million in 2025 to US\$ 65.9 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

Triclosan is incorporated in cosmetics mainly as a preservative, to stop bacteria from growing on the product and spoiling it. It is also used as a biocide in many other personal care products such as deodorants, soaps and shower gels.

Regulatory agencies, including the U.S. Food and Drug Administration (FDA) and the European Chemicals Agency (ECHA), imposed restrictions on triclosan due to concerns about its potential environmental impact and its contribution to antimicrobial resistance. In response to regulatory changes and consumer demand for safer and more natural ingredients, cosmetic manufacturers began reformulating their products to replace triclosan with alternative antimicrobial agents. Concerns about potential health risks associated with triclosan, such as endocrine disruption, and its presence in aquatic environments influenced regulatory decisions and consumer preferences.
