The global Triethanolamine for Personal Care market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Triethanolamine (TEA) is an organic compound commonly used in cosmetic products as a pH adjuster, emulsifier, and surfactant. It is a viscous, colorless liquid with a slight ammonia-like odor. In cosmetic formulations, TEA is used to adjust the pH of products to ensure they are at the optimal pH range for the skin. It is also used as an emulsifier, which helps to mix oil-based and water-based ingredients together, creating a stable and homogeneous product. TEA is often used in creams, lotions, shampoos, and other cosmetic products to help them spread easily and smoothly on the skin or hair.

The global market for triethanolamine (TEA) in the personal care industry is a significant segment within the broader chemicals and cosmetics sector. Triethanolamine is a versatile ingredient used in a variety of personal care products such as skincare, haircare, and cosmetics. It serves as an emulsifier, pH adjuster, and surfactant, enhancing the stability, texture, and overall performance of formulations. The United States and Canada have a well-established personal care industry, driving the demand for triethanolamine as a formulation ingredient. European countries are known for their strong cosmetics market and consumer demand for effective and aesthetically pleasing personal care products. Rapid urbanization, rising disposable income, and a growing focus on personal grooming in countries like China, Japan, and South Korea contribute to the demand for triethanolamine in personal care products.
