Trigeneration systems, also known as Combined Cooling, Heating, and Power (CCHP) systems, are advanced energy solutions that generate electricity, capture the waste heat for heating, and use that heat to produce cooling through absorption chillers. By making use of the byproducts of electricity generation, trigeneration systems significantly improve overall energy efficiency compared to separate systems for power, heating, and cooling. They are commonly used in hospitals, commercial buildings, data centers, and industrial facilities with simultaneous energy demands. Trigeneration helps reduce fuel consumption, lower greenhouse gas emissions, and improve energy security and cost-effectiveness.

United States market for Trigeneration Systems is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Trigeneration Systems is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
