2,2,4-trimethyl-1,3-pentanediol monoisobutyrate, also known as texanol, is an alcohol ester majorly used as a coalescing agent in latex paints. It is commercially manufactured by the self-condensation process of dry, acid-free isobutyraldehyde in the presence of sodium isobutoxide as a catalyst in an enclosed vessel. The mixture is then washed with water to remove other chemicals formed during the reaction and the remaining liquid is almost a 99% pure form of texanol.
