## Abstracts

The global Trimethylstearylammonium Bromide market size is predicted to grow from US\$ 100 million in 2025 to US\$ 130 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Octadecyltrimethylammonium Bromide (STAB/OTAB) is a white, powdery cationic surfactant with the CAS number 1120-02-1. It possesses potent bactericidal, antistatic, conditioning, and emulsifying properties, and exhibits resistance to both heat and light. It is primarily utilized in sectors such as textile printing and dyeing, synthetic fibers, hair conditioners, asphalt emulsification, and daily chemical products. It is typically soluble in alcohols and hot water.

Key upstream raw materials include octadecyl tertiary amine (derived from stearic acid or tallow oil) and bromomethane. Given the highly regional nature of bromine resources, upstream production costs are significantly influenced by price fluctuations within the bromine industry and the natural oils and fats market. The midstream segment focuses on high-purity refining processes and solvent control. Downstream markets are broadly distributed across various sectors, including daily chemicals and petrochemicals.

In 2025, global sales volume is projected to reach approximately 15,000 tons, with prevailing industrial market prices ranging between \$6,000 and \$8,500 per ton. The industry's gross profit margin typically falls within the range of 20% to 30%.
