A triple-chamber pacemaker is a cardiac pacemaker used to treat patients with severe heart disease, especially those with conditions such as ventricular arrest or atrioventricular block. Compared with the ordinary dual-chamber pacemaker, the three-chamber pacemaker has an extra wire, which can connect the right atrium, right ventricle and left ventricle of the heart at the same time to ensure a more coordinated heart contraction. This pacemaker can be adjusted according to the actual condition of the heart to ensure normal heart function and blood circulation.
