The global Triple Quadrupole LC/MS market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Triple quadrupole LC/MS combines liquid chromatography technology and mass spectrometry technology. It is a high-performance analytical instrument that can conduct qualitative and quantitative analysis of complex samples more accurately and quickly. It is widely used in biology, Pharmacy, chemistry, traditional Chinese medicine, traditional Chinese medicine, clinical medicine, food science, environmental science, forensic identification and other fields. The working principle of the triple quadrupole liquid mass spectrometer is to use liquid chromatography technology to efficiently separate complex sample components. The separated components are ionized by the ion source to generate ions, and the ions are selectively separated by the triple quadrupole. , use mass spectrometry technology to analyze selected specific ions to obtain molecular weight and molecular structure information, thereby achieving qualitative and quantitative analysis of samples.
