The global Triplex Gas Boosters market size is predicted to grow from US\$ 292 million in 2025 to US\$ 445 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

Triplex Gas Booster is a device that uses three sets of compression chambers to increase the gas pressure to the required level. It achieves gradual gas pressure increase through multiple compression stages (usually low pressure, medium pressure and high pressure), with higher compression efficiency and stability. The booster is suitable for occasions that require large flow and high pressure gas, such as oil, natural gas transportation, chemical production and gas storage industries. Its structural design makes the gas compression process smooth, can effectively reduce gas leakage and energy loss, and improve work efficiency.
