## Abstracts

The global Tritium Labeling Service market size is predicted to grow from US$ 102 million in 2025 to US$ 150 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Tritium Labeling Service refers to a specialized scientific service that involves the controlled introduction of tritium (?H, hydrogen-3), a radioactive isotope of hydrogen, into target molecules (such as small organic compounds, peptides, proteins, nucleotides, or pharmaceuticals) through chemical, biochemical, or isotopic exchange reactions. Its core objective is to produce radiolabeled compounds that retain the chemical and biological properties of their non-radioactive counterparts while enabling sensitive detection via tritium's low-energy ? radiation (18.6 keV) and long half-life (12.3 years). The service typically encompasses end-to-end support, including custom synthesis route design, tritium incorporation (e.g., catalytic tritiation, reductive tritiation, enzymatic labeling, or Wilzbach exchange), purification (to achieve high radiochemical and chemical purity), quality control (verification of specific activity, labeling position, and stability), and documentation for research or regulatory compliance.

United States market for Tritium Labeling Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Tritium Labeling Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Tritium Labeling Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
