Price: US\$ 3,660.00 (Single User License)

ID: GA603A87701BEN

Abstracts

The global TROP2 Antibody-Drug Conjugate market size is predicted to grow from US\$ 1687 million in 2025 to US\$ 4525 million in 2032; it is expected to grow at a CAGR of 14.1% from 2026 to 2032.

TROP2 Antibody-Drug Conjugate refers to targeted anticancer therapeutics that combine a monoclonal antibody directed against trophoblast cell-surface antigen 2 (TROP2) with a cytotoxic payload through a designed chemical linker. After binding to TROP2-expressing tumor cells, the ADC is internalized or releases active payload within the tumor microenvironment, enabling targeted delivery of potent cytotoxic agents while seeking to improve the therapeutic index relative to conventional systemic chemotherapy. The current commercial product scope is centered on sacituzumab govitecan, datopotamab deruxtecan and sacituzumab tirumotecan, representing differentiated architectures based on SN-38, DXd and belotecan-derived topoisomerase I inhibitor payloads, respectively. Linker design ranges from hydrolyzable systems to tetrapeptide-based cleavable and other proprietary linker technologies, creating differences in payload release, bystander activity, stability and safety profiles. Commercial use currently spans TROP2 ADC monotherapy and combination regimens, with principal applications in triple-negative breast cancer, HR-positive/HER2-negative breast cancer and EGFR-mutated non-small cell lung cancer.

Key Findings

Commercial TROP2 ADC market centers on three approved core molecules

Breast cancer remains the principal commercial application for TROP2 ADCs

EGFR-mutated NSCLC is an established commercial expansion pathway

Topoisomerase I inhibitor payloads dominate current commercial product architectures

Earlier-line and combination regimens are reshaping addressable treatment settings

Market Trends

The TROP2 Antibody-Drug Conjugate market is moving from a predominantly later-line rescue-treatment model toward broader positioning across treatment sequences. Recent regulatory progress illustrates this transition: datopotamab deruxtecan obtained U.S. approval for HR-positive/HER2-negative breast cancer in January 2025, EGFR-mutated NSCLC in June 2025 and selected unresectable or metastatic TNBC in May 2026, while Trodelvy expanded into first-line metastatic TNBC in the United States in June 2026. In China, sacituzumab tirumotecan has continued to broaden its approved breast cancer and EGFR-mutated NSCLC indications. These developments indicate that market competition is increasingly shifting from simply establishing TROP2 as a valid target toward optimizing ADC architecture, treatment-line positioning and combination strategies. Product development is also placing greater emphasis on linker stability, payload characteristics, bystander effect and tolerability, as these parameters influence whether TROP2 ADCs can penetrate earlier treatment lines and larger patient populations.

Market Dynamics

Drivers

The primary market driver is the continuing unmet treatment need in advanced breast cancer and EGFR-mutated NSCLC after resistance or progression following established systemic therapies. TROP2 provides a clinically validated cell-surface target for delivering highly potent topoisomerase I inhibitors, allowing ADCs to combine antibody-guided targeting with cytotoxic activity. Expansion of regulatory labels is progressively increasing the eligible patient population, particularly as products move from heavily pretreated patients toward earlier treatment lines. The commercial validation of multiple differentiated TROP2 ADC platforms also strengthens physician familiarity with the modality and supports investment in additional indication development, combination regimens and lifecycle expansion.

Restraints

Market expansion is constrained by the safety-management requirements inherent to highly potent ADCs and by the complexity of manufacturing antibody, linker and cytotoxic payload components as one consistently controlled pharmaceutical product. Different TROP2 ADCs exhibit distinct toxicity profiles: Trodelvy labeling highlights clinically important neutropenia and diarrhea, while datopotamab deruxtecan requires management of risks including interstitial lung disease or pneumonitis, ocular adverse reactions and stomatitis. These adverse-event profiles can influence patient selection, monitoring intensity, dose management and treatment sequencing. At the manufacturing level, stringent requirements for conjugation consistency, payload containment, analytical characterization and batch release also create higher technical barriers than conventional monoclonal antibody production.

Opportunities

The most attractive opportunities lie in increasing penetration within the three established application areas rather than relying solely on expansion into new tumor types. In TNBC and HR-positive/HER2-negative breast cancer, movement into earlier treatment lines could materially enlarge the addressable population, while combination regimens may extend the role of TROP2 ADCs beyond standalone therapy. In EGFR-mutated NSCLC, the emergence of approved TROP2 ADC options after targeted therapy and chemotherapy establishes a new commercial treatment category and creates opportunities for improved sequencing with existing targeted regimens. Continued optimization of linker-payload chemistry may further improve therapeutic index and help differentiate products within increasingly competitive breast and lung cancer treatment pathways.

Challenges

The principal long-term challenge is demonstrating sufficient clinical differentiation as several TROP2 ADCs compete for overlapping patient populations. Market success will increasingly depend on comparative efficacy, durability of response, safety, treatment-line positioning and compatibility with combination therapy rather than target novelty alone. Another challenge is treatment sequencing, particularly in breast cancer where oncologists have access to multiple targeted therapies and other ADC modalities. Biomarker strategy also remains important: TROP2 is broadly expressed, but optimal patient selection may depend on tumor biology, previous therapy and the specific characteristics of each ADC platform. Regulatory requirements for confirmatory studies, particularly where accelerated approval pathways are used, add further

commercialization uncertainty.

Industry Chain Analysis

The TROP2 Antibody-Drug Conjugate industry chain integrates biologics manufacturing with highly potent small-molecule chemistry. Upstream inputs include anti-TROP2 monoclonal antibodies or antibody manufacturing materials, cytotoxic payload intermediates, linker compounds, conjugation reagents, cell-culture media, chromatography materials and specialized analytical technologies. The midstream stage involves antibody production, payload and linker synthesis, linker-payload preparation, controlled conjugation, purification, characterization, formulation and sterile fill-finish. Manufacturing quality depends not only on antibody purity but also on drug-to-antibody ratio, conjugation distribution, free payload levels, aggregation, linker stability and other critical quality attributes.

Value creation is therefore concentrated in integrated platform capability rather than in any single raw material. Companies able to coordinate antibody engineering, medicinal chemistry, conjugation technology, process development, analytical testing and commercial-scale manufacturing are better positioned to control product consistency and support indication expansion. Downstream commercialization is concentrated in oncology hospitals and specialist treatment networks, where medical affairs, reimbursement access, adverse-event management and physician education materially influence product adoption. The technical complexity of ADC production creates relatively high development and manufacturing barriers, while commercial value is increasingly determined by clinical differentiation and the breadth of approved treatment settings.

Segment Insights

By Type, the current commercial market is structured around sacituzumab govitecan, datopotamab deruxtecan and sacituzumab tirumotecan, each representing a distinct TROP2 ADC platform. By Class, the products are differentiated primarily by topoisomerase I inhibitor payload technology: SN-38, DXd and a belotecan-derived payload. Although all three architectures use the same broad cytotoxic mechanism class, differences in payload potency, membrane permeability, drug-to-antibody ratio and release behavior create materially different pharmacological profiles. Trodelvy uses a hydrolyzable linker linked to SN-38, datopotamab deruxtecan uses a tetrapeptide-based cleavable linker with a DXd payload, while sacituzumab tirumotecan uses a proprietary linker with a belotecan-derived topoisomerase I inhibitor payload.

By Sort, monotherapy currently provides the commercial foundation of the category, while combination therapy represents an increasingly important expansion direction. The distinction is strategically significant because a successful combination regimen can move a TROP2 ADC into earlier treatment lines and integrate it into established immunotherapy or targeted-treatment pathways. As the category matures, competitive differentiation is expected to shift increasingly toward the balance between efficacy, tolerability and ease of combination rather than target selection itself.

Downstream Market Opportunities

Downstream demand is concentrated in advanced and metastatic breast cancer and EGFR-mutated NSCLC treatment settings. TNBC offers substantial opportunity as TROP2 ADCs move from later-line treatment toward first-line use, while HR-positive/HER2-negative breast cancer provides a large post-endocrine-therapy population requiring additional systemic treatment options. In EGFR-mutated NSCLC, TROP2 ADCs address patients who progress after EGFR-targeted therapy and chemotherapy, establishing a clinically distinct downstream market. Future commercial upside within these applications will depend on earlier-line penetration, combination strategies, treatment duration, reimbursement accessibility and successful integration into oncology treatment algorithms. The most commercially attractive opportunity is therefore not simply adding more tumor types, but increasing the proportion of eligible patients within already validated breast and lung cancer pathways.

Regional Insights

North America and China are currently important commercialization and regulatory-development markets for TROP2 ADCs. The United States has experienced rapid label expansion across the established application spectrum: datopotamab deruxtecan has gained approvals in HR-positive/HER2-negative breast cancer, EGFR-mutated NSCLC and selected TNBC populations, while Trodelvy expanded into first-line metastatic TNBC in June 2026. This creates a relatively mature competitive environment in which treatment sequencing, clinical differentiation and combination use are becoming increasingly important.

China has developed a differentiated market structure around sacituzumab tirumotecan, which has progressively expanded from TNBC into EGFR-mutated NSCLC and HR-positive/HER2-negative breast cancer. By February 2026, the product had received approval for a fourth indication in China, demonstrating rapid lifecycle expansion within

the defined market applications. Europe and Japan remain relevant commercial markets, but regional adoption is influenced by country-specific regulatory timing, reimbursement assessment and oncology-treatment pathways. These differences mean that global competition will not necessarily translate into identical product sequencing or commercial positioning across regions.

Competitive Landscape Analysis

The competitive landscape is defined by a small number of commercial TROP2 ADC platforms with increasingly overlapping indications. Gilead Sciences has established Trodelvy across TNBC and HR-positive/HER2-negative breast cancer and has expanded its U.S. positioning into first-line metastatic TNBC. Daiichi Sankyo and AstraZeneca jointly develop datopotamab deruxtecan, whose commercial footprint now spans HR-positive/HER2-negative breast cancer, EGFR-mutated NSCLC and selected TNBC populations in the United States. Kelun-Biotech has built sacituzumab tirumotecan into a commercial TROP2 ADC platform in China across the same major breast and lung cancer application areas. Competition is therefore evolving beyond first-mover advantage. Product architecture, efficacy-to-toxicity balance, treatment-line breadth, combination strategy, manufacturing capability, regulatory execution and market access are becoming more important determinants of competitive position. The market remains sufficiently concentrated for individual label expansions to alter competitive dynamics materially, particularly when they move a product into an earlier treatment line or a major additional application.

Report Scope

LPI (LP Information)' newest research report, the "TROP2 Antibody-Drug Conjugate Industry Forecast" looks at past sales and reviews total world TROP2 Antibody-Drug Conjugate sales in 2025, providing a comprehensive analysis by region and market sector of projected TROP2 Antibody-Drug Conjugate sales for 2026 through 2032. With TROP2 Antibody-Drug Conjugate sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world TROP2 Antibody-Drug Conjugate industry.

This Insight Report provides a comprehensive analysis of the global TROP2 Antibody-Drug Conjugate landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyses the strategies of leading global companies with a focus on TROP2 Antibody-Drug Conjugate portfolios and capabilities, market entry strategies,

market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global TROP2 Antibody-Drug Conjugate market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for TROP2 Antibody-Drug Conjugate and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global TROP2 Antibody-Drug Conjugate.

This report presents a comprehensive overview, market shares, and growth opportunities of TROP2 Antibody-Drug Conjugate market by product type, application, key players and key regions and countries.

Market Segmentation

Segmentation by Type:

Intramuscular Injection

Intravenous Injection

Segmentation by Drugs Type:

Sacituzumab Govitecan

Datopotamab Deruxtecan

Sacituzumab Tirumotecan

Segmentation by Treatment Mode:

TROP2 ADC Monotherapy

TROP2 ADC Combination Therapy

Segmentation by Application:

Triple-Negative Breast Cancer

HR-Positive/HER2-Negative Breast Cancer

EGFR-Mutated Non-Small Cell Lung Cancer

This report also splits the market by region:

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Middle East & Africa

Egypt

South Africa

Israel

Turkey

GCC Countries

The below companies that are profiled have been selected based on inputs gathered from primary experts and analyzing the company's coverage, product portfolio, its market penetration.

Gilead Sciences

Daiichi Sankyo

AstraZeneca

Sichuan Kelun-Biotech Biopharmaceutical

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

- 2.1 World Market Overview
 - 2.1.1 Global TROP2 Antibody-Drug Conjugate Market Size (2021-2032)
 - 2.1.2 TROP2 Antibody-Drug Conjugate Market Size CAGR by Region (2021 VS 2025 VS 2032)
 - 2.1.3 World Current & Future Analysis for TROP2 Antibody-Drug Conjugate by Country/Region (2021, 2025 & 2032)
- 2.2 TROP2 Antibody-Drug Conjugate Segment by Type
 - 2.2.1 Intramuscular Injection
 - 2.2.2 Intravenous Injection
 - 2.2.3 TROP2 Antibody-Drug Conjugate Market Size by Type
 - 2.2.3.1 TROP2 Antibody-Drug Conjugate Market Size CAGR by Type (2021 VS 2025 VS 2032)
 - 2.2.3.2 Global TROP2 Antibody-Drug Conjugate Market Size Market Share by Type (2021-2026)
- 2.3 TROP2 Antibody-Drug Conjugate Segment by Drugs Type
 - 2.3.1 Sacituzumab Govitecan
 - 2.3.2 Datopotamab Deruxtecan
 - 2.3.3 Sacituzumab Tirumotecan
 - 2.3.4 TROP2 Antibody-Drug Conjugate Market Size by Drugs Type
 - 2.3.4.1 TROP2 Antibody-Drug Conjugate Market Size CAGR by Drugs Type (2021 VS 2025 VS 2032)
 - 2.3.4.2 Global TROP2 Antibody-Drug Conjugate Market Size Market Share by Drugs Type (2021-2026)
- 2.4 TROP2 Antibody-Drug Conjugate Segment by Treatment Mode

- 2.4.1 ROP2 ADC Monotherapy
- 2.4.2 TROP2 ADC Combination Therapy
- 2.4.3 TROP2 Antibody-Drug Conjugate Market Size by Treatment Mode
 - 2.4.3.1 TROP2 Antibody-Drug Conjugate Market Size CAGR by Treatment Mode (2021 VS 2025 VS 2032)
 - 2.4.3.2 Global TROP2 Antibody-Drug Conjugate Market Size Market Share by Treatment Mode (2021-2026)
- 2.5 TROP2 Antibody-Drug Conjugate Segment by Application
 - 2.5.1 Triple-Negative Breast Cancer
 - 2.5.2 HR-Positive/HER2-Negative Breast Cancer
 - 2.5.3 EGFR-Mutated Non-Small Cell Lung Cancer
 - 2.5.4 TROP2 Antibody-Drug Conjugate Market Size by Application
 - 2.5.4.1 TROP2 Antibody-Drug Conjugate Market Size CAGR by Application (2021 VS 2025 VS 2032)
 - 2.5.4.2 Global TROP2 Antibody-Drug Conjugate Market Size Market Share by Application (2021-2026)

3 TROP2 ANTIBODY-DRUG CONJUGATE MARKET SIZE BY PLAYER

- 3.1 TROP2 Antibody-Drug Conjugate Market Size Market Share by Player
 - 3.1.1 Global TROP2 Antibody-Drug Conjugate Revenue by Player (2021-2026)
 - 3.1.2 Global TROP2 Antibody-Drug Conjugate Revenue Market Share by Player (2021-2026)
- 3.2 Global TROP2 Antibody-Drug Conjugate Key Players Head office and Products Offered
- 3.3 Market Concentration Rate Analysis
 - 3.3.1 Competition Landscape Analysis
 - 3.3.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)
- 3.4 New Products and Potential Entrants
- 3.5 Mergers & Acquisitions, Expansion

4 TROP2 ANTIBODY-DRUG CONJUGATE BY REGION

- 4.1 TROP2 Antibody-Drug Conjugate Market Size by Region (2021-2026)
- 4.2 Global TROP2 Antibody-Drug Conjugate Annual Revenue by Country/Region (2021-2026)
- 4.3 Americas TROP2 Antibody-Drug Conjugate Market Size Growth (2021-2026)

 - 10.5.1 Egypt Market TROP2 Antibody-Drug Conjugate Forecast
 - 10.5.2 South Africa Market TROP2 Antibody-Drug Conjugate Forecast
 - 10.5.3 Israel Market TROP2 Antibody-Drug Conjugate Forecast
 - 10.5.4 Turkey Market TROP2 Antibody-Drug Conjugate Forecast
- 10.6 Global TROP2 Antibody-Drug Conjugate Forecast by Type (2027-2032)
- 10.7 Global TROP2 Antibody-Drug Conjugate Forecast by Application (2027-2032)
 - 10.7.1 GCC Countries Market TROP2 Antibody-Drug Conjugate Forecast

11 KEY PLAYERS ANALYSIS

11.1 Gilead Sciences

- 11.1.1 Gilead Sciences Company Information
- 11.1.2 Gilead Sciences TROP2 Antibody-Drug Conjugate Product Offered
- 11.1.3 Gilead Sciences TROP2 Antibody-Drug Conjugate Revenue, Gross Margin and Market Share (2021-2026)
- 11.1.4 Gilead Sciences Main Business Overview
- 11.1.5 Gilead Sciences Latest Developments

11.2 Daiichi Sankyo

- 11.2.1 Daiichi Sankyo Company Information
- 11.2.2 Daiichi Sankyo TROP2 Antibody-Drug Conjugate Product Offered
- 11.2.3 Daiichi Sankyo TROP2 Antibody-Drug Conjugate Revenue, Gross Margin and Market Share (2021-2026)
- 11.2.4 Daiichi Sankyo Main Business Overview
- 11.2.5 Daiichi Sankyo Latest Developments

11.3 AstraZeneca

- 11.3.1 AstraZeneca Company Information
- 11.3.2 AstraZeneca TROP2 Antibody-Drug Conjugate Product Offered
- 11.3.3 AstraZeneca TROP2 Antibody-Drug Conjugate Revenue, Gross Margin and Market Share (2021-2026)
- 11.3.4 AstraZeneca Main Business Overview
- 11.3.5 AstraZeneca Latest Developments

11.4 Sichuan Kelun-Biotech Biopharmaceutical

- 11.4.1 Sichuan Kelun-Biotech Biopharmaceutical Company Information
- 11.4.2 Sichuan Kelun-Biotech Biopharmaceutical TROP2 Antibody-Drug Conjugate

Product Offered

11.4.3 Sichuan Kelun-Biotech Biopharmaceutical TROP2 Antibody-Drug Conjugate Revenue, Gross Margin and Market Share (2021-2026)

11.4.4 Sichuan Kelun-Biotech Biopharmaceutical Main Business Overview

11.4.5 Sichuan Kelun-Biotech Biopharmaceutical Latest Developments
