The global Troponin market size is predicted to grow from US\$ 1653 million in 2025 to US\$ 2776 million in 2031; it is expected to grow at a CAGR of 9.0% from 2025 to 2031.

Troponin, or the troponin complex, is a complex of three regulatory proteins (troponin C, troponin I, and troponin T) that is integral to muscle contraction in skeletal muscle and cardiac muscle, but not smooth muscle.

Discussions of troponin often pertain to its functional characteristics and/or to its usefulness as a diagnostic marker or therapeutic target for various heart disorders in particular as a highly specific marker for myocardial infarction or heart muscle cell death.

A troponin test measures the levels troponin T or troponin I proteins in the blood. These proteins are released when the heart muscle has been damaged, such as occurs with a heart attack.

Leading producers in the sector are Abbott, Roche and Siemens Healthcare, with revenue ratios of 28.303%, 21.249% and 10.063% in 2019.
