Truck air suspension springs are a special type of spring used in truck suspension systems that use air pressure to support and adjust the vehicle's suspension height and stiffness. Unlike traditional leaf springs, air suspension springs use compressed air to provide support and suspension adjustment. Such systems typically include airbags or bags that are installed in the vehicle's suspension system and use air pressure to adjust the vehicle's suspension height and stiffness. This design allows the driver to adjust the vehicle's suspension height as needed to suit different road conditions or load situations.
