Truck-mounted Mechanical Arm, also known as a mobile crane or a hydraulic truck crane, is a type of crane that is mounted on a truck chassis. It is designed to be mobile and can be driven to different work sites, making it highly versatile and suitable for various lifting and loading tasks. The truck-mounted crane consists of a crane boom, which is the main lifting arm, and a hydraulic system that powers the crane's movements. The crane boom is typically telescopic, meaning it can extend and retract to reach different heights and distances. It may also have an articulated section, allowing it to bend and maneuver in different directions.
