The global Truck Refueling System market size is predicted to grow from US$ 897 million in 2025 to US$ 1244 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2024, global Truck Refueling System production reached approximately 11.16 K units, with an average global market price of around 78.4 K USD per unit.

A Truck Refueling System is an integrated setup designed to supply fuel or energy to trucks efficiently and safely. It typically consists of storage tanks, pumps, dispensers, hoses, nozzles, meters, control units, and sometimes automation or monitoring software. The system can be fixed at refueling stations or mobile for on-site service, and it supports various energy types such as diesel, gasoline, LNG, CNG, hydrogen, or electricity. Its primary function is to ensure fast, accurate, and environmentally compliant refueling operations for fleet and industrial vehicles.

The industry chain of Truck Refueling Systems can be divided into three main segments: upstream, midstream, and downstream. Upstream involves the supply of raw materials and core components, including fuel pumps, control valves, flow meters, storage tanks, sensors, and electronic modules. Midstream includes manufacturers and system integrators that design, assemble, and calibrate complete refueling systems, as well as software providers offering automation and fuel management solutions. Downstream mainly covers logistics operators, truck fleet owners, fuel station operators, and industries such as construction, mining, and transportation that rely on these systems for daily refueling operations.

The cost structure of a Truck Refueling System is typically composed of several major

elements. Raw materials and key components account for about 60?70% of total costs, including pumps, tanks, pipes, meters, and electrical control systems. Manufacturing and assembly contribute roughly 10?15%, covering labor, processing, and integration. Research and development, automation software, and design expenses make up around 5?10%, while installation, testing, and transportation costs represent about 5%. Administrative, marketing, and after-sales service costs occupy the remaining 5?10%, depending on system complexity and customization level.

The single-line production capacity of Truck Refueling System is 1,070 to 1,078 units per year, the average gross profit margin was 30.4%.
