Telematics is a combination of the words telecommunications and informatics. Telematics, in a broad sense, is any integrated use of telecommunications with information and communications technology. It is the technology of sending, receiving and storing information relating to remote objects – like vehicles – via telecommunication devices.

Truck telematics is a way of monitoring the location, movement, status and behavior of a vehicle within a fleet. This is achieved through a combination of a GPS receiver and an electronic GSM device that is installed in each vehicle, which then communicates with the user and web-based software.

Truck telematics is mainly composed of three parts: terminal (hardware), software (mobile Hardwired Install Telematics APP, Client PC) and cloud platform.

The North America holds the largest share in the global truck telematics products market, its revenue of global market exceeds 34%. The next is Europe and Asia-Pacific.

Trimble, Wabco, Continental, Delphi and CalAmp are the main manufacturers of the truck telematics, the market share of top 3 is about 35%.
