Abstracts

The global Trusted Data Space Solution market size is predicted to grow from US\$ 636 million in 2025 to US\$ 1998 million in 2032; it is expected to grow at a CAGR of 16.5% from 2026 to 2032.

Trusted Data Space Solution comprises a comprehensive suite of software, platforms, and operational services designed to support the construction of infrastructure for data circulation and utilization, as well as the establishment of trusted data spaces. Typically, such solutions consist of modules including data routers/connectors, identity authentication and trust management, access control, data asset mapping, privacy/confidential computing, blockchain-based data notarization, metadata catalogs, data product marketplaces, compliance auditing, and cross-border data flow governance. The core objective is to enable cross-entity, cross-industry, and cross-regional data exchange?characterized by the ability to 'supply effectively, circulate freely, utilize optimally, and ensure security'?while ensuring that data remains within its original domain or is shared only under controlled conditions. Demand for these solutions is primarily driven by initiatives such as China's Trusted Data Space construction, the EU's Data Act, Catena-X/Manufacturing-X, Japan's Ouranos Ecosystem, and the need for compliant circulation of AI training data. The market as a whole is currently transitioning from a policy-driven phase toward large-scale industry adoption, with typical comprehensive gross margins ranging from approximately 35% to 60%.
