The global Trypsin market size is predicted to grow from US\$ 283 million in 2025 to US\$ 451 million in 2031; it is expected to grow at a CAGR of 8.1% from 2025 to 2031.

Trypsin is an enzyme that aids with digestion. An enzyme is a protein that speeds up a certain biochemical reaction. Trypsin is found in the small intestine. It can also be made from fungus, plants, and bacteria. However, it is usually made for commercial purposes from the pancreas of livestock. Trypsin is a serine protease found in the digestive system of many vertebrates where it hydrolyzes proteins. Through trypsinisation, it cleaves peptides at the carboxyl side of arginine and lysine, unless they are followed by a proline. Trypsin has an optimal operating pH of about 7.5-8.5 and optimal operating temperature of about 37°C. Unlike chymotrypsin, the activity of trypsin is not affected by the inhibitor tosyl phenylalanyl chloromethyl ketone (TPCK).

Market Drivers for Trypsin

The trypsin market is primarily driven by the increasing demand for protease enzymes in various industries, including biotechnology, pharmaceuticals, and food processing. In biotechnology and pharmaceuticals, trypsin is essential for cell culture, protein purification, and the production of therapeutic proteins, including monoclonal antibodies. The growing biopharmaceutical industry, along with advancements in biologics and gene therapy, has significantly boosted trypsin demand. Additionally, the rising demand for high-quality meat and dairy products has led to an increased application of trypsin as a meat tenderizer and in the production of dietary supplements, further expanding its market footprint.

Challenges in the Trypsin Market

One of the key challenges in the trypsin market is the high cost of production, particularly when sourced from animal pancreases. This has led to the exploration of alternatives, such as recombinant trypsin, which can be more cost-effective and meet the growing demand for animal-free products. Additionally, the trypsin market faces competition from other protease enzymes that may offer similar functionality at a lower cost. Regulatory concerns and ethical considerations regarding animal-derived products also pose challenges, particularly in markets with stricter regulatory frameworks, leading to an increasing demand for plant-based or synthetic alternatives.

North America and Asia Pacific is the largest market for trypsin, accounting for about 65%. Thermo Fisher, Biozym and Corning are the leading producers, accounting for about 60% of the total.
