TSV copper-filled plating system is a precision process equipment specially used to achieve copper filling in high aspect ratio through-holes on silicon wafers. It is designed to ensure complete filling of the through-holes and uniformity of the electroplating layer. This equipment uses advanced technologies such as selective electroplating and deep hole filling technology to meet high precision and high quality requirements. TSV copper electroplating filling equipment can accurately control the electroplating parameters, including current density and plating rate, to adapt to the characteristics of through-holes with different aspect ratios. Its high cost is reflected in its complex mechanical structure and precise process control, which are the key to ensuring high yield and reliability. In addition, the equipment helps to reduce production costs and improve production efficiency by optimizing process flows and improving automation levels.
