The global Tube in Tube Sterilizer market size is predicted to grow from US\$ 596 million in 2025 to US\$ 1025 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

In 2025, global sales of tube in tube sterilizers reached 42,000 units, with an average selling price of US\$14,500. Tube-in-tube sterilizers are devices used for the efficient sterilization of medical devices and laboratory consumables. Their double-layer structure, consisting of an inner and outer tube, achieves uniform airflow or steam circulation, improving sterilization efficiency and safety. They are widely used in hospital disinfection centers, pharmaceutical companies, and research institutions. Upstream raw materials mainly include 304/316L stainless steel sheets, high-temperature resistant sealing rings, steam pipelines, and electronic control components. Midstream assembly and testing are handled by specialized medical device manufacturers. Downstream supply is direct to hospital disinfection centers, pharmaceutical and biological laboratories. Global total production capacity is approximately 48,000 units, with an average industry gross profit margin of approximately 52%. With the upgrading of healthcare systems, the expansion of hospital disinfection centers, and the increase in biopharmaceutical production capacity, the demand for efficient, energy-saving, and traceable sterilization equipment continues to grow, especially in emerging markets and the renovation of high-level hospitals, presenting significant business opportunities. At the same time, the trend towards intelligent and automated equipment provides space for future technological upgrades and domestic substitution.
