A tube revolver is a laboratory device designed to gently mix or rotate samples held in tubes. It typically consists of a rotating disc or wheel that holds tubes in various positions, allowing them to revolve or rotate at a set speed. This movement helps ensure even mixing or incubation of the samples, which is essential for reactions, hybridizations, and other procedures where consistent sample agitation is required. Tube revolvers are commonly used in molecular biology, chemistry, and clinical labs for applications like antibody binding, staining, and nucleic acid hybridization. Most tube revolvers come with adjustable rotation speeds and can accommodate various tube sizes, ranging from small microcentrifuge tubes to larger centrifuge tubes. Some models also offer temperature control, allowing researchers to maintain specific environmental conditions while mixing.

United States market for Tube Revolver is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
