The tube roller mixer is a laboratory instrument used for mixing or agitating small volumes of liquid. It is designed to roll tubes or vials containing samples back and forth to ensure they are thoroughly mixed. The tubes or vials are placed on rollers that rotate around a central axis, ensuring uniform mixing without creating excessive shear forces that can damage delicate samples. Tube roller mixers come in different sizes and configurations, depending on the number and size of the tubes or vials they can accommodate. They typically have adjustable speed and time controls and can operate at different angles to adapt to different types of samples. Tube roller mixers are commonly used in a variety of applications in life sciences, such as in molecular biology, biochemistry, and chemistry. They are useful for mixing reagents, enzymatic reactions, cell culture, DNA preparation, and other laboratory protocols.
