The tubular anorectal stapler is a medical device used for anastomosis in anorectal surgery. Anorectal surgery is a common surgery to treat rectal cancer, rectal polyps, rectal prolapse and other diseases. During surgery, if part of the rectum needs to be removed, an anastomosis is usually done to connect the anus to the rectal stump. A tubular anorectal stapler is a specially designed instrument that consists of two tubular metal rings, each with a circular cutout. During the operation, the doctor inserts one ring of the stapler into the anus and the other into the rectal stump, and then rotates the stapler to align and close the incisions of the two rings. This creates a tube-like passage that connects the anus to the rectal stump. By using a tubular anorectal stapler, precise positioning and rapid closure of the rectal anastomosis can be achieved, reducing surgical time and trauma, and improving surgical results and patients' quality of life. The tubular anorectal stapler is widely used in anorectal surgery and has become one of the common surgical instruments.
