A Gel battery design is typically a modification of the standard lead-acid automotive or marine battery. A gelling agent is added to the electrolyte to reduce movement inside the battery case. Many gel batteries also use one-way valves in place of open vents, which help the normal internal gasses to recombine back into water in the battery, reducing gassing. Generally, gel batteries are less tolerant of high heat and are charged at lower power than traditional or AGM batteries.

Exide Technologies, EnerSys, VISION, Shoto and Sacred Sun are the leaders of the Tubular GEL Battery industry, which take about 35% market share. United States is the major region of the global market, which takes about 20% market share.
