Abstracts

The global Tubular Packaging Film market size is predicted to grow from US$ 2013 million in 2025 to US$ 2680 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2024, global Tubular Packaging Film production reached approximately 686 kilotons?with an average global market price of around US$ 2,800 per ton, a single-line production capacity of approximately 5,000 tons/year, and a gross profit margin of approximately 10%-30%. Tubular packaging film is a type of flexible plastic film that is extruded in the form of a continuous tube and supplied mainly on rolls for downstream conversion into bags, liners and form-fill-seal (FFS) packs. In its simplest form, the tube is made of mono-layer polyethylene (LDPE, LLDPE or HDPE) and used as lay-flat tubing to fabricate custom-length bags by sealing and cutting one or both ends, providing cost-efficient and size-flexible protection against dust, moisture and mechanical damage for a wide range of industrial goods, profiles and pipes. In more advanced packaging applications, tubular film is co-extruded as a multilayer PA/PE or PA/EVOH/PE structure, combining the toughness and gas-barrier performance of polyamide with the moisture resistance and sealability of polyethylene to create vacuum and shrink packs for fresh meat, sausages, cheese, fish and convenience foods.

The value chain for tubular packaging film starts upstream with polymer and additive producers, supplying commodity resins such as LDPE, LLDPE, HDPE, PP and specialty materials like polyamides, EVOH and bio-based polymers, alongside masterbatches, slip/antiblock agents, antistatic additives and separating powders used in blown film processing. In the mid-stream, film manufacturers operate blown-film extrusion lines (often multi-layer VAREX-type or similar) to co-extrude mono- and multilayer tubular films, optimizing thickness, barrier, mechanical strength and recyclability; many players

also integrate printing, lamination and slitting to deliver printed tubular film, tubular bags, FFS tubular reels or medical tubular pouches. Downstream, end users include meat and dairy processors, snack and bakery companies, chemical and fertilizer producers, industrial component manufacturers, medical device and diagnostic firms, as well as e-commerce and logistics operations that use tubular film for protective wrapping and custom-length packaging.

United States market for Tubular Packaging Film is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Tubular Packaging Film is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Tubular Packaging Film is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
