## Abstracts

The global Tubular Pressure Bandage market size is predicted to grow from US\$ 269 million in 2025 to US\$ 363 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Tubular pressure bandages are seamless tubular medical dressings made of elastic knitted materials (such as cotton, spandex, and polyester blends). They provide continuous, uniform gradient or constant pressure for postoperative swelling control, varicose vein treatment, lymphedema management, and wound dressing and fixation. They are breathable, comfortable, easy to put on and take off, and reusable. The upstream of the industry chain includes suppliers of elastic yarns (such as Lycra and spandex), nonwoven fabrics, dyeing and finishing auxiliaries, and textile machinery. The midstream consists of medical device manufacturers, who must possess Class II medical device registration and ISO 13485 quality system certification. The downstream covers hospital vascular surgery departments, rehabilitation departments, pharmacies, e-commerce platforms, and home care users. Due to low raw material costs, mature production processes, and being a high-frequency consumable, the industry's overall gross profit margin is between 25% and 50%. In 2024, the global production of tubular pressure bandages was approximately 324 million pieces, with an average market price of US\$0.85 per piece. Global production capacity in 2024 was approximately 405 million pieces.

United States market for Tubular Pressure Bandage is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
