The global Tubular Solar Stills market size is predicted to grow from US$ 49.89 million in 2025 to US$ 80.23 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2024, global production of Tubular Solar Stills reached approximately 200 thousand units, with an average global market price of around USD 240 per unit. Tubular Solar Stills are solar-powered water purification devices that use a long, transparent tubular enclosure to capture and convert solar energy into heat, which evaporates impure or saline water contained inside. The vapor then condenses on the cooler inner surface of the tube and is collected as distilled, potable water, while salts and other contaminants are left behind. Their elongated tubular shape increases the surface area exposed to sunlight and improves thermal efficiency, making them more compact, portable, and effective than flat-basin stills for small-scale freshwater production in remote or off-grid locations.

United States market for Tubular Solar Stills is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Tubular Solar Stills is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Tubular Solar Stills is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Tubular Solar Stills players cover Do-Right Solar, Rudra Solar Energy, Elemental Water Makers, Mascara Renewable Water, Desolenator, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
