The Tubular Type Air Curtain is a specialized device used to create a barrier of high-velocity air across an open doorway or entrance, separating conditioned indoor spaces from outdoor environments. It consists of a long cylindrical casing housing a powerful fan system that blows a continuous stream of air horizontally across the door opening. This air stream creates an invisible barrier that prevents the exchange of indoor and outdoor air, effectively minimizing the infiltration of dust, insects, pollutants, and unwanted temperature fluctuations. Tubular Type Air Curtains are commonly used in commercial and industrial settings, such as retail stores, restaurants, warehouses, and manufacturing facilities, to enhance energy efficiency, maintain indoor air quality, and

improve occupant comfort.

The prospects for Tubular Type Air Curtains are highly favorable, driven by the growing demand for energy-efficient and hygienic solutions to maintain indoor air quality. Tubular Type Air Curtains create an effective barrier between indoor and outdoor environments, preventing the exchange of air, pollutants, and temperature fluctuations. With increased emphasis on energy conservation, these air curtains help reduce heat transfer and energy loss while maintaining a comfortable indoor environment. Their versatile usage across various industries, including retail, hospitality, and manufacturing, further boosts the market prospect. As businesses prioritize energy efficiency, air quality, and customer comfort, the demand for Tubular Type Air Curtains is expected to witness sustained growth, contributing to improved energy savings and indoor environment control.
