A tubular vial (tubular glass vial) is made of long glass tubes with a rigid wall thickness; the tubing is then sliced to proper lengths to make the vial. The preferred standpoint to tubing vials is that the divider is uniform in thickness and the base of the vial is level (versus arched in a formed vial). Tubing vials are a better alternative for use in lyophilization applications.

The global Tubular Vial market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
