This is a minimally invasive surgical method to treat solid cancers, Special probes are used to “burn” or “freeze” cancers without the usual surgery. Computed Tomography (CT), Ultrasound (US) or Magnetic Resonance Imaging (MRI) is used to guide and position the needle probe into the tumor. This requires only a tiny hole, usually less than 3 mm via which the probe is introduced. When the probe is within the cancer it is attached to a generator which “burns” or “freezes” the cancer. In this report, we only study the Tumor Ablation devices without Consumables.

Global Tumor Ablation key players include Chongqing Haifu Medical, HealthTronics, AngioDynamics, Boston Scientific, Medtronic, etc. Global top five manufacturers hold a share about 55%.

North America is the largest market, with a share about 45%, followed by Europe.
