The global Tumor Mice Model market size is predicted to grow from US$ 2064 million in 2025 to US$ 3071 million in 2031; it is expected to grow at a CAGR of 6.8% from 2025 to 2031.

A tumor mouse model, also known as a mouse xenograft model, is an experimental system where human tumor cells or tumor tissues are transplanted into immunodeficient mice. This model is widely used in cancer research to study tumor biology, test potential therapies, and understand the mechanisms of tumor growth, progression, and response to treatment.

Syngeneic mice retain an intact immune system; therefore, they are specifically used in immune-oncology studies. Cancer immunotherapies are designed to work in conjunction with a patient’s immune system to increase natural anti-tumor response.Oncology Mice Models Market Segmented By Humanized Immune System Mice Models, Syngeneic Tumor Mice Models, Immunodeficient Mice Models, NOG Mice Models, Spontaneous Tumor Mice Models Product

Rising Incidence of Cancer: The increasing prevalence of cancer worldwide has driven the demand for tumor mice models to study different types of cancer, test potential treatments, and explore personalized medicine approaches.

Advancements in Cancer Research: Continuous advancements in cancer research have led to a greater focus on understanding tumor biology, treatment response, and resistance mechanisms. Tumor mice models provide a valuable tool for conducting preclinical studies, facilitating drug discovery and development.

Growing Investments in Research and Development: Governments, academic institutions, and pharmaceutical/biotechnology companies are investing heavily in cancer research and drug development. This has led to increased funding for tumor mice models and related research initiatives.

Rise of Precision Medicine and Personalized Therapies: The emergence of precision medicine, which aims to tailor treatments based on individual genetic profiles and tumor characteristics, has further driven the demand for tumor mice models to study tumor heterogeneity and develop personalized therapies.

Collaborations and Partnerships: Research organizations and pharmaceutical companies often collaborate with suppliers of tumor mice models to access customized mouse models or obtain specialized services, fostering growth in the market.

Key players in the tumor mice model market include suppliers of tumor mice models and associated services. These companies provide a range of mouse models, including patient-derived xenograft (PDX) models, genetically engineered models, cell line-derived xenograft (CDX) models, and others.

Additionally, companies providing related products and services such as breeding and maintenance of mouse colonies, genetic characterization, preclinical imaging services, and contract research organization (CRO) services contribute to the overall tumor mice model market.

The tumor mice model market is expected to continue growing as cancer research advances and personalized medicine approaches become more prominent.
