Abstracts

The global Tuned Noise Panel market size is predicted to grow from US$ 1880 million in 2025 to US$ 3209 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

In 2024,global Ttuned noise panel production reached approximately 4,456 KUnit, with an average global market price of around USD 400K per Kunit. A factory gross profit of USD 112K per Kunit with 28% gross margin. A single line full machine capacity production is around 50K unit per line per year. downstream demand is concentrated in transportation/infrastructure followed by commercial/institutional, industrial and smaller retrofit. In highway noise mitigation, precast and tuned cavity noise panels are installed on steel posts with foundation to reduce mid-frequency traffic noise for adjacent residential areas. A tuned noise panel is a specialized acoustic treatment engineered to specifically absorb or control sound waves at certain, targeted frequencies. Unlike standard, broadband acoustic panels which absorb a wide range of frequencies, a tuned panel is optimized for performance within a particular frequency range, often the more challenging low-to-mid frequencies.

United States market for Tuned Noise Panel is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Tuned Noise Panel is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
