Tungsten copper throat insert is a key lining material for the throat of solid rocket motor nozzles. A metal alloy composite material, they are primarily used in aerospace solid rocket motor structures. Their core function is to withstand the impact of high-temperature, high-velocity gas flow, maintain throat shape stability, and ensure engine thrust and efficiency. Produced through a tungsten-copper infiltration process, this material combines tungsten's high melting point (approximately 3410°C), high strength, and low thermal expansion coefficient with copper's high thermal conductivity and ductility. Global sales of tungsten-copper throat liners reached 2,271 units in 2024, with an average selling price of US$ 5.1 per unit. The primary upstream raw material is tungsten-copper alloy.
