The global Tunnel Electrostatic Precipitator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Tunnel electrostatic precipitator is a device specially used to clean the air in tunnels. It captures and removes suspended particles and pollutants in the air through the principle of electrostatics. It uses a high-voltage electric field to charge dust, and then adsorbs the charged particles on the dust collecting plate to purify the air. Tunnel electrostatic precipitator can effectively reduce dust and harmful substances in the tunnel, improve air quality, and ensure the safety of equipment and health of personnel in the tunnel. It is widely used in places such as traffic tunnels that require a lot of ventilation.
