Turbine pneumatic vibrator? is a mechanical device that uses compressed air as a power source. It is mainly used to solve problems such as material clogging, promote material flow, and improve material mixing efficiency. Turbine pneumatic vibrators convert compressed air into kinetic energy through a pneumatic motor, driving the internal shaft core to rotate, thereby generating vibration. Its working principle is to utilize the internal shaft core rotation under the action of the air source to achieve infinite cycle work and achieve the purpose of vibration.
