A turbo compressor for chiller, commonly referring to a high-speed centrifugal or magnetic bearing compressor, is a key component used in high-efficiency chiller systems to compress refrigerant vapor and enable effective heat exchange. Unlike traditional positive displacement compressors, turbo compressors operate at very high rotational speeds and often use oil-free magnetic bearings, offering benefits such as reduced energy consumption, lower maintenance, and quieter operation. They are particularly suited for large-scale cooling applications in data centers, commercial buildings, hospitals, and industrial facilities where precise temperature control and energy efficiency are critical.
