Turbo pumps are high-speed, high-efficiency pumps commonly used in vacuum systems to create and maintain low-pressure environments. They are typically employed in scientific, industrial, and semiconductor applications where precise vacuum levels are critical. These pumps operate by using a rotor that spins at very high speeds, imparting momentum to gas molecules and expelling them through the pump exhaust. Turbo pumps can achieve very low base pressures, making them essential in applications like electron microscopy, surface analysis, and vacuum deposition processes. Turbo pump controllers regulate the speed of the pump’s rotor and monitor operational parameters such as pressure, temperature, and rotational speed. These controllers ensure optimal performance and safety by adjusting the pump's speed according to the system's vacuum requirements, providing real-time feedback and protection against overpressure or thermal overload conditions. Controllers are typically equipped with interfaces for remote monitoring, allowing for integration into automated systems.

United States market for Turbo Pumps and Controllers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
