## Abstracts

The global Turbocharger Cleaning Services market size is predicted to grow from US\$ 153 million in 2025 to US\$ 224 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

To address the issues of power loss, increased fuel consumption, and shortened component lifespan caused by carbon buildup, oil coking, and blade dynamic imbalance under long-term high-temperature and high-load conditions in turbochargers, turbocharger cleaning services have emerged. Since the widespread application of turbocharging technology in passenger vehicles in the early 21st century, the field of in-depth automotive engine maintenance has developed significantly. Currently, turbocharger cleaning services have evolved into a comprehensive service encompassing non-disassembly cleaning, deep disassembly cleaning, dynamic cleaning with professional equipment, and the addition of maintenance agents. These services are widely used in passenger car after-sales maintenance, commercial vehicle fleet maintenance, high-performance modified vehicle maintenance, and diesel engine after-treatment system maintenance, significantly improving engine power performance, reducing fuel consumption and emissions, and extending turbocharger lifespan.

United States market for Turbocharger Cleaning Services is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
