Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Turbocharger Impeller market.

The turbine impeller is the component of the turbocharger that is subjected to most stress. Here, too, temperatures reach up to 1,050°C, and the purely mechanical forces place the component under extreme stress. These turbine wheels are generally melted from high-strength nickel base alloys. The entire process, from melting to casting, takes place in a vacuum.

Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. According to our research, global

Turbochargers market is about US\$ 19160 million in 2022. Demand from Automotive and Engineering Machinery are the major drivers for the industry. Major players of the turbochargers market include Borgwarner Inc., Honeywell International Inc., Mitsubishi Heavy Industries Ltd, IHI Corporation, Continental AG, and Cummins Inc.
