A turbocompressor for air conditioning, typically a centrifugal (or dynamic) compressor, is a high-efficiency, high-capacity compressor used in large-scale HVAC systems such as district cooling, commercial buildings, data centers, and industrial facilities. It operates by using a high-speed impeller to accelerate the refrigerant gas, converting kinetic energy into pressure through a diffuser. Turbocompressors are known for their oil-free operation, low maintenance requirements, and superior energy efficiency, especially when integrated with technologies like magnetic bearings and variable-speed drives. Though not common in residential systems, they play a critical role in modern central chiller plants where performance, reliability, and energy savings are essential.
