A twin agent fire fighting unit is a specialized piece of equipment used in firefighting operations. It consists of two separate tanks, one containing water and the other containing a foam or dry chemical agent. The unit is typically mounted on a fire truck or trailer for easy transport to the scene of a fire. When the unit is activated, the water and agent are mixed together and sprayed onto the fire simultaneously. This combination of water and agent is highly effective at extinguishing fires, as the water helps to cool the flames while the agent helps to smother them.

The global Twin Agent Fire Fighting Unit market size is projected to grow from US$ million in 2023 to US$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
