The global Twin Screw Feeders market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Twin screw feeders are machines that use two parallel screws to transport and meter bulk materials, such as powders, granules, or pellets.

Twin screw feeders have a hopper that holds the material and feeds it into the screws, which rotate in the same or opposite directions to move the material along the feeder. The screws can have different shapes, sizes, pitches, and clearances to suit different types of materials and flow rates. Twin screw feeders are also known as twin screw conveyors, twin screw extruders, or twin screw dosing systems. The industry trend of twin screw feeders is positive and growing, as more customers and industries require precise and reliable feeding of various bulk materials. Twin screw feeders can offer several advantages, such as high accuracy, flexibility, versatility, efficiency, and durability. Twin screw feeders can also handle a wide range of materials, such as sticky, cohesive, abrasive, or fragile materials, as well as mixtures of different components. The main drivers of this growth are the increasing demand for twin screw feeders in various sectors, such as food and beverage, pharmaceutical, chemical, plastic, rubber, and mining.
