According to this study, the global Twin-Screw Slurry Mixing System market size will reach US\$ 1267 million by 2031.

The Twin-Screw Pulping Solution is a pulping technology system designed based on the mechanical principle of twin screws. It centers around a twin-screw device, where two intermeshing screws rotate within a specific chamber, applying forces such as shearing, squeezing, and mixing to the raw materials. This process facilitates fiber separation, fibrillation, and thorough blending with additives, transforming the raw materials into a uniform pulp. The solution is characterized by high efficiency and strong controllability, allowing flexible adjustment of process parameters according to raw material properties and pulping requirements.
