Twin shaft continuous mixer is an industrial mixing equipment designed for high-capacity, continuous material mixing processes. It uses two synchronously counter-rotating horizontal mixing shafts to achieve high-shear, high-uniformity dynamic mixing in the entire mixing chamber. The equipment can continuously feed and discharge materials, and is suitable for uniform mixing of multi-phase materials such as aggregates, powders, liquid additives, etc. It is particularly suitable for large-scale working conditions such as road stabilization layers, dry-mixed mortar, lime soil, cement soil, and solid waste solidification. Its structure usually includes spiral blades, wear-resistant linings, speed-regulating drive systems, and adjustable discharge ports to ensure mixing efficiency and discharge consistency. Compared with intermittent mixers, twin-shaft continuous mixers have the advantages of high output, low energy consumption, stable operation, and small footprint. It is one of the key equipment in modern infrastructure projects and building materials pretreatment.
