Twin shaft spiral mixer is a high-efficiency mixing equipment consisting of two synchronously rotating horizontal mixing shafts. It is widely used in industries such as building materials (such as concrete, mortar), chemicals, environmental protection, mining and feed processing. Its core working principle is to arrange multiple blades with staggered angles on two counter-rotating mixing shafts to form strong tumbling, shearing and convection effects in the mixing tank, so that the materials can be evenly mixed in a very short time. Compared with single-shaft mixers, twin-shaft spiral mixers have significant advantages such as high mixing uniformity, fast speed, wide range of material viscosity, and low agglomeration and sedimentation. They are particularly suitable for large-scale material processing scenarios with high requirements for mixing quality and efficiency. Some high-end models can also be equipped with frequency conversion control, automatic feeding, spray humidification and online monitoring systems to improve the controllability and automation level of the mixing process.

United States market for Twin Shaft Spiral Mixer is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
