The global Two-Component Silicone Rubber market size is predicted to grow from US$ 895 million in 2025 to US$ 1267 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

In 2024, global production of two-component silicone rubber is 213,810 tons, with an average selling price of $4,200 per ton.

Two-component silicone rubber is a silicone elastomer composed of two components (commonly referred to as component A and component B). It is primarily vulcanized at room or elevated temperatures through addition or condensation reactions. Its base polymer is a linear polysiloxane, supplemented with crosslinkers, catalysts, fillers, and other additives. Component A typically contains the polysiloxane and filler, while component B contains the crosslinker and catalyst. When mixed in the correct proportions, it rapidly cures to form a flexible, high- and low-temperature-resistant, age-resistant, non-toxic, and odorless elastomer. This material exhibits excellent flowability, formability, and physiological inertness, making it widely used in the medical, electronics, food, and mold manufacturing industries. It is particularly well-suited for potting, injection molding, and casting of complex structures.

United States market for Two-Component Silicone Rubber is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
