The global Two-component Thermal Adhesive market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Two-component thermally conductive silica gel is used as a heat transfer medium for cooling electronic devices. It can be cured in situ into a soft elastomer and does not cause stress on electronic components. After curing, it closely adheres to its contact surface to reduce thermal resistance, which is more conducive to heat conduction between the heat source and the surrounding heat sink, motherboard, metal shell and housing.
