Two-component toughened adhesive is a structural adhesive material composed of a resin matrix and a curing agent, which forms a high-strength adhesive layer through chemical cross-linking and curing. It is widely used in aerospace, rail transportation, automobile manufacturing, electronic packaging, construction engineering and other fields with high requirements for bonding strength and toughness. The adhesive introduces toughening components such as rubber modifiers, nanofillers or flexible segments into the basic formula, so that it has excellent impact resistance, peel strength and fatigue durability while maintaining high-strength bonding force. It is particularly suitable for bonding between dissimilar materials (such as metals and composite materials, plastics and ceramics).

United States market for Two-component Toughened Adhesive is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
